Stacking Stones | Mosaics | Wall Panels | Slates | Sand Stones

ABOUT US

Ambar Lifestyle Products with its stunning range of stone products varying from stacking stones, ledge stones, wall panels, mosaics, flag stones, slate tiles, sand stone tiles & more. All these are produced using the wide range of natural stones gifted by mother nature to enhance its unique colors, textures, shapes and patterns.

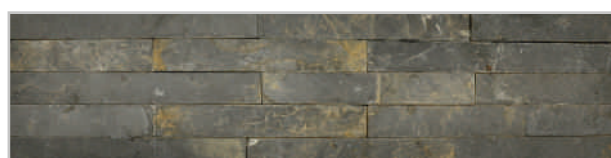

We are committed to high quality products, innovative designs, competitive pricing & on time deliveries. In order to have long lasting business relationships, we have a developed quality control system to inspect each product at every stage to minimize rejections, resulting in low production costs & meeting timely delivery schedules. Our specialties are wall panels, ledge stones, waterfall, mosaics & tiles with various kinds of surfaces like natural, polished, split face, rock face, chiseled and more.

Our biggest assets remain dedicated skilled manpower & large quantity raw material reserves.

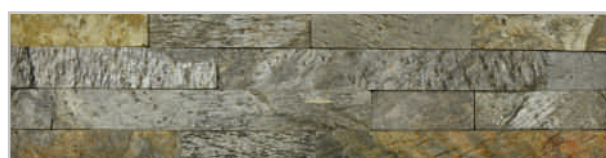

We undertake customization as per client specifications.

Our Products Meet International Standards of Quality, Reliability & Innovation

ST 101 Jet Black 5 Layer

What is Natural Stone?

"Natural Stone" refers to a number of products quarried from the earth, used over many thousands of years as building materials and decorative enhancements. These products include Granite, Marble, Limestone, Travertine, Slate, Quartzite, Sandstone and others. They are more than just rocks – natural stone is hand selected from the best, most consistent sources for durability and beauty.

Natural stone products differ in composition, color, and texture even among pieces from the same source. This is usually considered a benefit, lending itself to one of a kind designs and distinctive, dramatic applications.

Why should I use natural stone in my home?

Natural stone is prized its distinctive beauty and the sense of peaceful tranquility it creates, but there are also many practical benefits to using Natural Stone in your home. Natural Stone products are more durable than many artificial products, often lasting for decades with very little maintenance. With Natural Stone there are no worries about exposure to harmful chemicals in the home or released into the environment during production or disposal. Why invest time and money into a look-alike? Natural Stone is the real thing that the artificial products try to emulate.

How many different colors of stones are available?

Natural stone is available in a nearly endless variation of colors, patterns and veining. These may include shades of beige, gray, gold, red, pink, blue, and green.

Stone Installation

How much variation can I expect from the sample of stone shown?

Each stone is unique, and some types of stone display more variation between the pieces than others. Granites show variation in color & size , but may have differing patterns and grain density. Slates tend to show a wide variation in color, even within the same pallet of stone.

What is blending? When is blending recommended?

Because stone is a natural product, there is always some variation within a selection. By sorting out the stone tiles before installing, it is possible to place the tiles on the surface before installing, blending the varying colors, grain, and veining as desired.

What are general recommendations for installation?

Open all boxes and mix up all of the pieces before installation. This will help to create a visually pleasing distribution of stone variation. A good installer knows that stones require a specific thin-set adhesive for correct installation due to its porosity.

Care and Maintenance

What care and maintenance of the stone products are recommended?

Stone surfaces are very easy to maintain. Clean stone floors with warm water and a mild liquid soap. Never use acid cleansers or abrasive chemicals on stone. Natural stone should be sealed after installation and every one to two years thereafter, depending on its usage.

What is an impregnator sealer? How does it help stone?

Impregnator sealer consists of microscopic balls of silicone that attach themselves to crevices inside the stone. These balls become a permanent part of the stone, and act as a waterproof shield and enhances the colors.

How often do I need to apply penetrating sealer to my natural stone surfaces?

There is no set rule on how often to seal your natural stone. Sealing can be as frequent as six months for higher traffic areas on marble, slate, travertine, and limestone.
